

Digital Forensics File Similarity Report

Case ID:	FH-2026-0001	Analysis ID:	AN-2026-0003
Case Name:	DEMO - Operation Cobalt File Comparison	Timestamp:	2026-08-15 08:16:15
Investigator:	Det. M. Sakib	Classification:	OFFICIAL FORENSIC RECORD

100%
HIGH SIMILARITY

Evidence File Details

Attribute	File A (Reference)	File B (Target)
Filename	luxman2.0 (1).pdf	luxman2.0 (1).pdf
File Size	261,656 B	261,656 B
MIME Type	application/pdf	application/pdf
MD5	ae4d54e15b27a255032c6314f3ba2566	ae4d54e15b27a255032c6314f3ba2566
SHA-256	05ec4a43a43cfb581501ace5fed0660fc72e05efbd2357d616e5df6373f924c3	05ec4a43a43cfb581501ace5fed0660fc72e05efbd2357d616e5df6373f924c3
ssdeep	3072:eRtd4l9qlH67fJg0ngnDPoMnjB2nyyCy7:ezs6H6y0ngToMjCyly7	3072:eRtd4l9qlH67fJg0ngnDPoMnjB2nyyCy7:ezs6H6y0ngToMjCyly7
TLSH	T12C1E2A413FA2F76E5960695FEFAA5A5FFFFFFED6FAEA59156845E75BEAEAEFEE79FFEBF742181271803081009600005549E810D92991C1850A94D0F85A0C02EC078113D3	T12C1E2A413FA2F76E5960695FEFAA5A5FFFFFFED6FAEA59156845E75BEAEAEFEE79FFEBF742181271803081009600005549E810D92991C1850A94D0F85A0C02EC078113D3

Fuzzy Hash Breakdown

Algorithm	Metric / Output	Similarity Assessment
ssdeep (CTPH)	Score: 100 / 100	100% structural match
TLSH (Locality Sensitive)	Distance: 0	100% normalized similarity

Analyst Findings & Notes

The analyzed files demonstrate a high degree of structural and sequence similarity according to fuzzy hashing algorithms.

Forensic Methodology

Cryptographic hashing (MD5, SHA-256) calculates exact, tamper-evident digests where a single-bit edit results in complete avalanche divergence. Fuzzy hashing (ssdeep / CTPH and TLSH) evaluates similarity across modified, obfuscated, or variant

binaries by analyzing localized byte sequence distributions and piecewise context windows.

Forensic Disclaimer & Investigative Guidelines

IMPORTANT NOTICE: Similarity assessment is an investigative file-relationship indicator and DOES NOT independently establish that a file is malicious. High similarity may indicate shared code libraries, common compilation toolchains, or legitimate software derivatives. Malware determination requires additional static, dynamic, sandboxing, YARA, PE section, and threat-intelligence analysis.
