Open Graph metadata
Semantic HTML
Robots.txt
Performance Optimization
Responsive Design

Input Validation
Data Sanitization
CORS
Helmet
Rate Limiting

WEBSITE BUILD OBJECTIVE

Build a modern, professional, production-ready website for ArtifactDev Labs.

BRANDING

Use ArtifactDev Labs consistently with the tagline Build. Learn. Innovate.

MAIN WEBSITE STRUCTURE

Pages: Home, About, Courses, Course Details, Internships, Projects, Services, Certificate Verification, Contact, Privacy Policy, Terms & Conditions. Reusable Navbar and Footer.

BACKEND ARCHITECTURE

Node.js + Express structure with controllers, routes, models, middleware, config, services, and server.js. APIs: GET /api/courses, GET /api/courses/:id, POST /api/contact, GET /api/certificates/:certificateId.

FUTURE ADMIN DASHBOARD ARCHITECTURE

Prepare for add/edit/delete courses, change Google Form URL, manage internships/projects/certificates/testimonials/content.

SECURITY REQUIREMENTS

Validate inputs, sanitize data, use environment variables, avoid exposing API keys, configure CORS, use Helmet, add rate limiting, secure headers, configurable Google Form URLs.

FINAL DELIVERABLE

Complete working app including React frontend, Node/Express backend, course system, Google Form integration, internship system, projects, services, certificate verification, contact, SEO, responsive UI, and future-ready API architecture.
